

MEASUREGEOM Command

1020 kbadmin June 29, 2021 [Measuring](#) 0 4787

MEASUREGEOM command is more powerful in GstarCAD 2016, not only adds the missing options such as measure radius, measure angle, and measure volume, but also sum area and total length. Sum area: Not only can calculate the area of a closed object but also can calculate a closed region area. If there are multiple objects need to be selected, window selection is available.

Total length: Calculates the object length and total length associated with selected arc, circle, polyline segments or line objects. you can either select the single object by click or select multiple objects with window selection.
