

ACISOUT command, ACIS file export

1209 kbadmin June 30, 2021 [Compatible format](#) 0 4881

The ACISOUT command is used to export a body object, solid, or region to an ACIS file.

Command

ACISOUT

Command Prompts

Select object: select the object
Select object: select the object and press ENTER

Function Description:

If the selected object is not a solid or region object, it will be ignored and displays the “Create ACIS File” dialog box; inputting the file name to be created, the selected object will be exported to an ASCII file.
