Area Table

1239 kbadmin June 30, 2021 Annotation 0 4910

Command name: AREATABLE

AREATABLE command automatically dimension and count the area of anenclosed object and export the result to a table in the current drawing area.

The enclosed area or object can be marked with a number or area symbol, and the area table data can be generated at the same time.

The area data can be exported to a text or table file.
The values in the table can be changed automatically when the number or area size is changed.
