

Enter commands on the command Line

1301 kbadmin April 11, 2022 [Getting started](#) 0 6213

To enter a command you can use the keyboard. Some commands have abbreviated names called **command aliases**. Using the keyboard, type the full **command name** or command alias on the command line and press ENTER or SPACEBAR.

Specify Command Options

You will either see a set of options or a dialog box when you enter commands on the command line. For example, when you enter the **circle** at the command prompt, the following prompt will be displayed: **CIRCLE Specify center point for circle or [3P/2P/Ttr/Arc/Multiple]:**

Enter the letters capitalized in one of the options in the brackets to try a different option.

Execute Commands

Press **SPACEBAR** or **ENTER** to execute commands. You can also right-click your pointing device after entering command names or responses to prompts.

Repeat and Cancel Commands

If you want to repeat the command you just executed, press **ENTER** or **SPACEBAR**, or **right-click** your pointing device at the command prompt.
