BACKGROUNDPLOT system variable

Function Description:

The **BACKGROUNDPLOT** system variable is used to control whether to close background plot when plotting or publishing a drawing.

Type : Integer
Saved in : Registry
Initial value : 2
Range : 0 ~ 3

System Variable Value:

0 : plot and publish in foreground
1 : plot in background and publish in foreground
2 : plot in foreground and publish in background
3 : plot and publish in background

It is default to plot in foreground and publish in background. When -PLOT, PLOT, -PUBLISH, and PUBLISH are used in a script (SCR file), the BACKGROUNDPLOT system variable value is ignored, and -PLOT, PLOT, -PUBLISH, and PUBLISH are processed in the foreground.
