DEFLPLSTYLE system variable

Function Description:

The **DEFLPLSTYLE** system variable is used to specify the default plot styles for all layers when opening a drawing which created in a earlier version, or for Layer 0 when creating a new drawing without using a drawing template.

Type : Strings
Saved in : Registry
Initial value : Normal

When the drawing is open and the **PSTYLEPOLICY** set to be 1, the **DEFLPLSTYLE** is readable and its default value is "**BYCOLOR**". If the **PSTYLEPOLICY** set to be 0, the **DEFLPLSTYLE** is writable and its default value is "**NORMAL**".
Users could use **CONVERTPSTYLES** command to convert current drawing to be named plot styles or color dependent plot styles.
