DIMASSOC system variable

1425 GstarCAD MY /KW July 12, 2021 [System Variables](#) 0 2326

Function Description:

The **DIMASSOC** system variable is used to control the association of dimension object and whether to explode dimensions.

Type : Integer
Saved in : Drawing
Initial value : 2
Range : 0,1,2

System Variable Value:

0 : Create exploded dimensions. There is no association between different dimension elements. Line, arc, arrow, and dimension text are all created as different objects.
1 : create non association objects. Each element is a single objects in dimension. If one definition point changed, all dimension updates.
2: create association objects. Each element is a single objects in dimension. One or more definition points are associated with points on geometric objects in dimension. If moving association points, dimension location, direction, and value all update
