

DIMTIX system variable

1448 GstarCAD MY /KW July 13, 2021 [System Variables](#) 0 1927

Function Description:

The **DIMTIX** system variable is used to draw text between extension lines.

Type : Parameter

Saved in : Drawing

Initial value : off

System Variable Value:

Off : for linear dimension and angular dimension, place dimension text internal extension lines if there is sufficient space

On : draw dimension text between extension lines even if the text is usually placed outside of extension lines. For radius dimension and diameter dimension, the dimension text could be forced to place external of circles or arcs by DIMTIX system variable.
