

# DRAGMODE system variable

1515 GstarCAD MY /KW July 14, 2021 [System Variables](#) 0 1660

## Function Description:

The **DRAGMODE** system variable is used to controls the display of objects being dragged.

**Type** : Integer

**Saved in** : Registry

**Initial value** : Auto

The **DRAGMODE** command has the same name as this system variable . Use the SETVAR command to access this system variable. If **DRAGMODE** is on, the outline of the object is displayed when you drag it to another position.

## System Variable Value:

**OFF** : does not display an outline of the object as you drag it

**ON** : displays the outline of the object as you drag it only if you enter drag at the command prompt after selecting the object to drag

**Auto** : always displays an outline of the object as you drag it
