DRAGMODE system variable

Function Description:

The **DRAGMODE** system variable is used to controls the display of objects being dragged.

Type : Integer
Saved in : Registry
Initial value : Auto

The **DRAGMODE** command has the same name as this system variable . Use the SETVAR command to access this system variable. If **DRAGMODE** is on, the outline of the object is displayed when you drag it to another position.

System Variable Value:

OFF : does not display an outline of the object as you drag it
ON : displays the outline of the object as you drag it only if you enter drag at the command prompt after selecting the object to drag
Auto : always displays an outline of the object as you drag it
