EXTMAX system variable

Function Description:

The **EXTMAX** system variable is used to store the value of right-top corner point in the drawing extents. (Read-Only)

Type : 3D point
Saved in : Drawing
Initial value : Unknown

If some new objects created outside of limits, users could use "**All**" or "**Extent**" option of **ZOOM** command to scale objects to new extents.
The **EXTMAX** system variable value is the world coordinate value in current space.
