

# FILLETRAD system variable

1567 GstarCAD MY /KW July 15, 2021 [System Variables](#) 0 2511

## Function Description:

The **FILLETRAD** system variable is used to store the current fillet radius for 2D objects.

**Type** : Real

**Saved in** : Drawing

**Initial value** : 0.0000

If modified **2D** fillet radius by **FILLET** command, the value of **FILLETRAD** system variable will change to match its radius value.
