LAYLOCKFADECTL system variable

Function Description:

The **LAYLOCKFADECTL** system variable is used to control the amount of fading for objects on locked layers.

Type : Integer
Saved in : Registry
Initial value : 50
Range : -90 ~ 90

System Variable Value:

 0 : locked layers are not faded
>0 : when the value is positive, control the percentage of fading up to 90%
<0 : when the value is negative, locked layers are not faded, but the value is saved for switching to that value by changing the sign

Note: the fading value is limited to 90 percent to avoid confusion with layers that turned off or frozen.
