# LAYLOCKFADECTL system variable

**Function Description:**

The **LAYLOCKFADECTL** system variable is used to control the amount of fading for objects on locked layers.

**Type** : Integer
**Saved in** : Registry
**Initial value** : 50
**Range** : -90 ~ 90

**System Variable Value:**

 **0** : locked layers are not faded
**>0** : when the value is positive, control the percentage of fading up to 90%
**<0** : when the value is negative, locked layers are not faded, but the value is saved for switching to that value by changing the sign

Note: the fading value is limited to 90 percent to avoid confusion with layers that turned off or frozen.
