

LWDEFAULT system variable

1688 GstarCAD MY /KW July 21, 2021 [System Variables](#) 0 1505

Function Description:

The **LWDEFAULT** system variable is used to set the value for default linewidth.

Type : Enum

Saved in : Registry

Initial value : 25

The default linewidth could be set to any valid linewidth value in hundredths of millimeters, including: 0, 5, 9, 13, 15, 18, 20, 25, 30, 35, 40, 50, 53, 60, 70, 80, 90, 100, 106, 120, 140, 158, 200, and 211. All values must be entered in hundredths of millimeters. (Multiply a value by 2540 to convert values from inches to hundredths of millimeters)
