MAXSORT system variable

Function Description:

The **MAXSORT** system variable is used to set the maximum number for items, such as file names, layer names, and block names sorted by number order in dialog box, pull down list, and palettes.

Type : Integer
Saved in : Registry
Initial value : 1000
Range : 0 ~ 32767

If the total number of items(named objects) exceeds this settings, it will not sort any items.
