

PICKADD system variable

1743 GstarCAD MY /KW July 23, 2021 [System Variables](#) 0 1859

Function Description:

The **PICKADD** system variable is used to control whether subsequent selections replace the current selection set or add to it.

Type : Integer

Saved in : User-settings

Initial value : 2

Range : 0,1,2

System Variable Value:

0 : close **PICKADD**. The new selected objects become selection set. The previous selected objects are removed from selection set automatically.

1 : close **PICKADD**. The new selected objects become selection set. The previous selected objects are removed from selection set automatically.

2 : open **PICKADD**. Add each selected object (single selected or window selected) to current selection set. If the SELECT command is used, keeps objects selected after the command ends.

Note: when selecting object, pressing SHIFT key to add objects to or remove objects from selection set.
