

# ACISOUT command

1951 GstarCAD MY /KW July 30, 2021 [CAD Commands](#) 0 1860

The **ACISOUT** command is used to export a body object, solid, or region to an ACIS file.

## Command Access:

**Command :** ACISOUT

## Command Prompts:

**Select object :** select the object and press ENTER

## Function Description:

If the selected object is not a solid or region object, it will be ignored and displays the “Create ACIS File” dialog box; inputting the file name to be created, the selected object will be exported to an ASCII file.
