

APERTURE command

1959 GstarCAD MY /KW August 2, 2021 [CAD Commands](#) 0 2244

The **APERTURE** command is used to controls the size of the object snap target box.

Command Access:

Command : APERTURE (or aperture for transparent use)

Command Prompts:

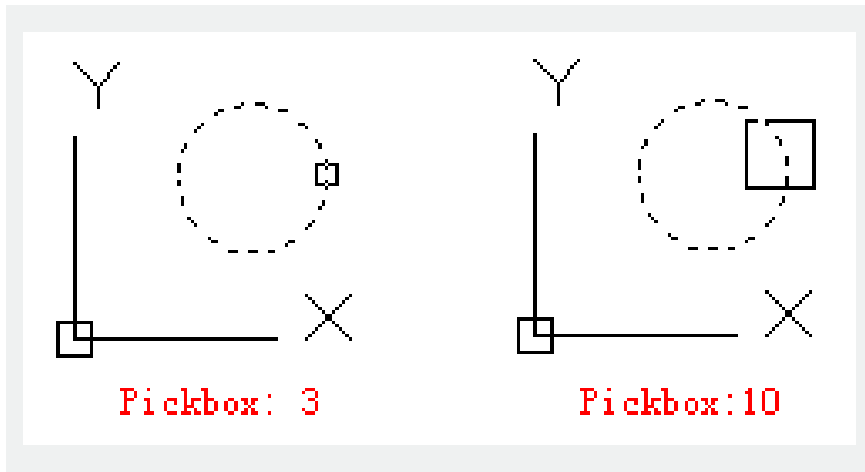

Enter new value for APERTURE<10>:

Function Description:

The object snap could be applied on objects in the object Aperture box or objects that intersect with the object Aperture box. Users could get a bigger Aperture size by setting a higher value for APERTURE system variable, as well control whether to display it by APBOX command. Those settings could also be made in “draw” label in “Options” dialog box.

The APERTURE command could control object Aperture box rather than Pick box that displayed under the command prompt of “select object”.
