

BMPOUT command

2008 GstarCAD MY /KW August 4, 2021 [CAD Commands](#) 0 1957

The **BMPOUT** command is used to save files as bitmaps in device-independent format for selected objects.

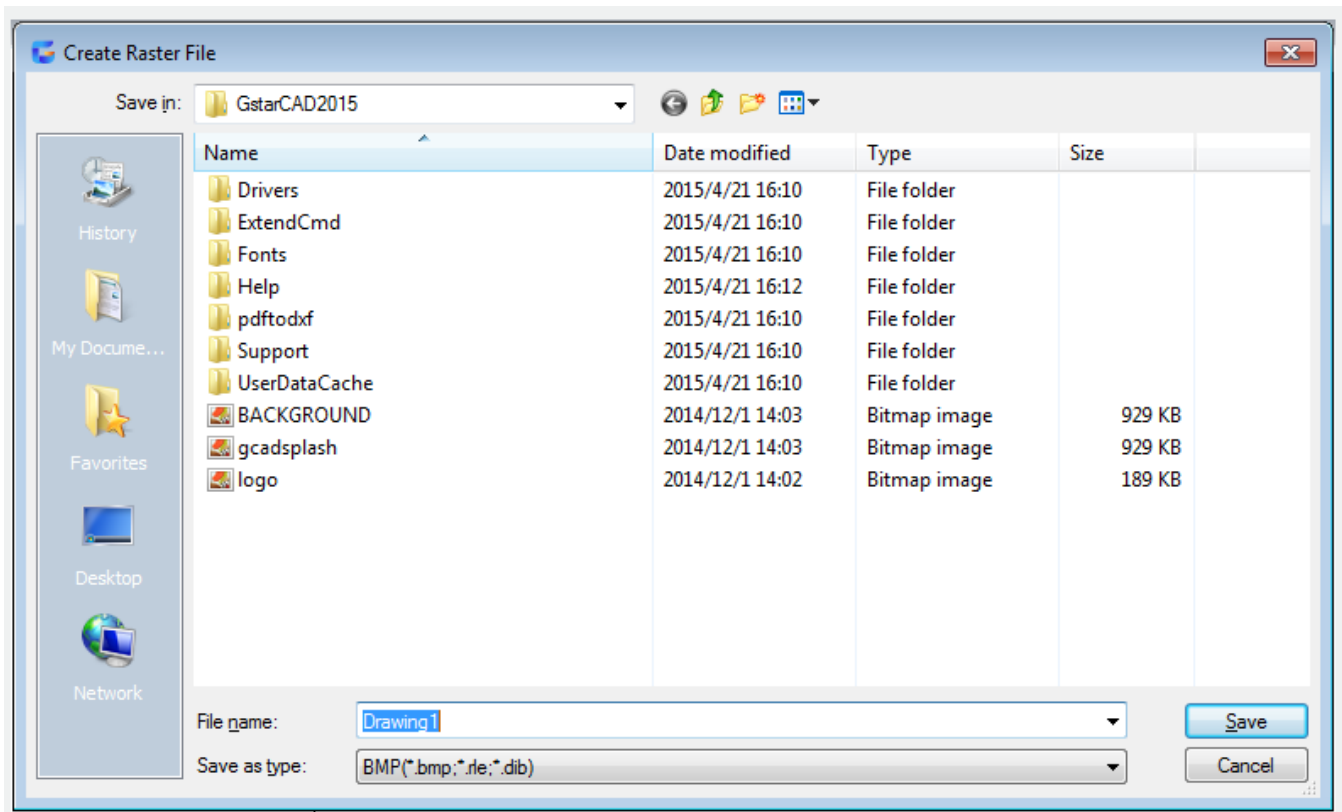

Command Access:

Command : BMPOUT

Command Prompts:

Select objects or <all objects and viewports>:

Function Description:

Inputting the file name in the "Create Raster File" dialog box, the bitmap file displays. This file could reflect contents on screen.

Note: if the FILEDIA system variable is specified to 0, it will display command prompts.
