DIMARC command

2075 GstarCAD MY /KW April 15, 2022 CAD Commands 0 2531

The **DIMARC** command is used to create an arc length dimension.

Command Access:

Ribbon : Annotation > Dimension > Dimension > Arc Len **Menu** : Dimension > Arc Length **Command** : DIMARC

Command Prompts:

Select arc or polyline arc segment:: Specify arc length dimension location or [Mtext/Text/Angle/Partial/Leader]:

Function Description:

This command could measure arc or polyline arc segment. The dimension line could be orthogonal or radial. There is an arc symbol in front of dimension text.

Relative Glossary:

Arc length dimension location:

Specify dimension location and direction.

Mtext:

Edit dimension annotation text by In-place text editor. Users could input special characters and symbols by control code or Unicode character string.

If the unit conversion is off, users could input square bracket ([]) to display them.

The current annotation style determines the appearance of generated measured value.

Text:

Customize annotate text under command prompt.

The generated measured value will be displayed in angle bracket (<>). If the unit conversion is off, users could input square bracket ([]) to display them.

User could reset the dimension style in "Text" option of New, Modify, and Override in Dimension Style Manager Dialog box.

Angle:

Specify the angle of text.

Partial : Shorten length of arc dimension.

Leader : Add a leader. Only if the arc or arc segment is larger than 90 degrees, this option displays. The leader is created in radial direction and point to center of arc.

No leader : Cancel "Leader" option before creating Leader. If users want to remove leader, they should remove arc dimension and then create a new arc dimension without leader.
