

# LAYMCUR command

2172 GstarCAD MY /KW April 15, 2022 [CAD Commands](#) 0 3510

The **LAYMCUR** command is used to change the current layer to be another layer of specified object.

## Command Access:

**Ribbon** : Home > Layer > LAYCUR

**Menu** : Format > Layer Tools >Change to Current Layer

**Command** : LAYCUR

## Command Prompts:

Select object whose layer will become current:

## Function Description:

Users could change the current layer by selecting objects on current layer. This is a convenient way to specify layer name in layer properties manager.
