PSETUPIN command

The **PSETUPIN** command is used to input the customized page settings to new drawing layout.

Command Access:

Command : PSETUPIN

Function Description:

Users could select drawing files (.dwg), sample files (.dwt) or graph interchange format files (.dxf) from the "Select Page Setup From File" dialog box. If the FILEDIA system variable specified to 0 and inputting "-psetupin" under the command prompt, it will display the command prompts.
After selecting the file, the "Import Page Setups" dialog box pops up.
