TEXTFIT command

The **TEXTFIT** command is used to stretches or shrinks text object(s) by selecting new start and/or end points.
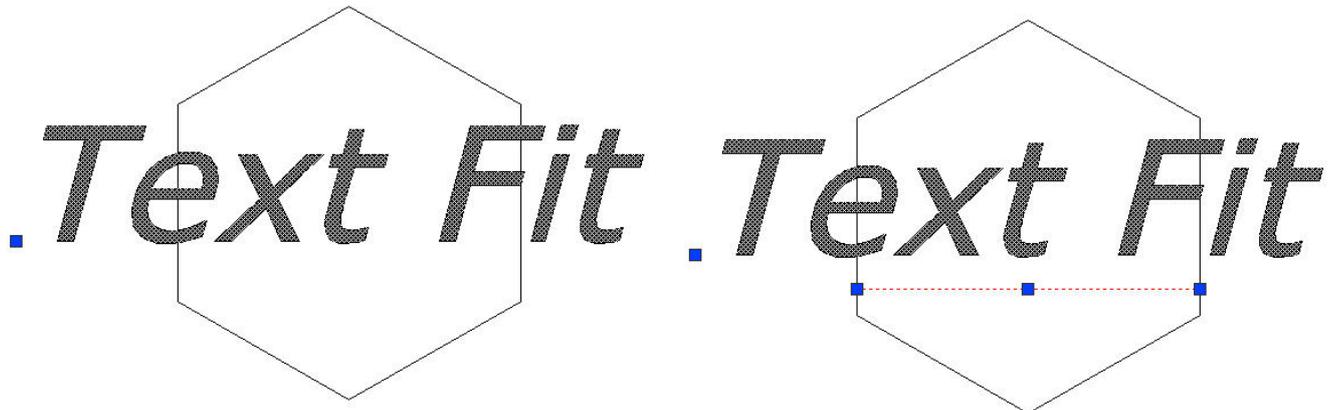

Command Access :
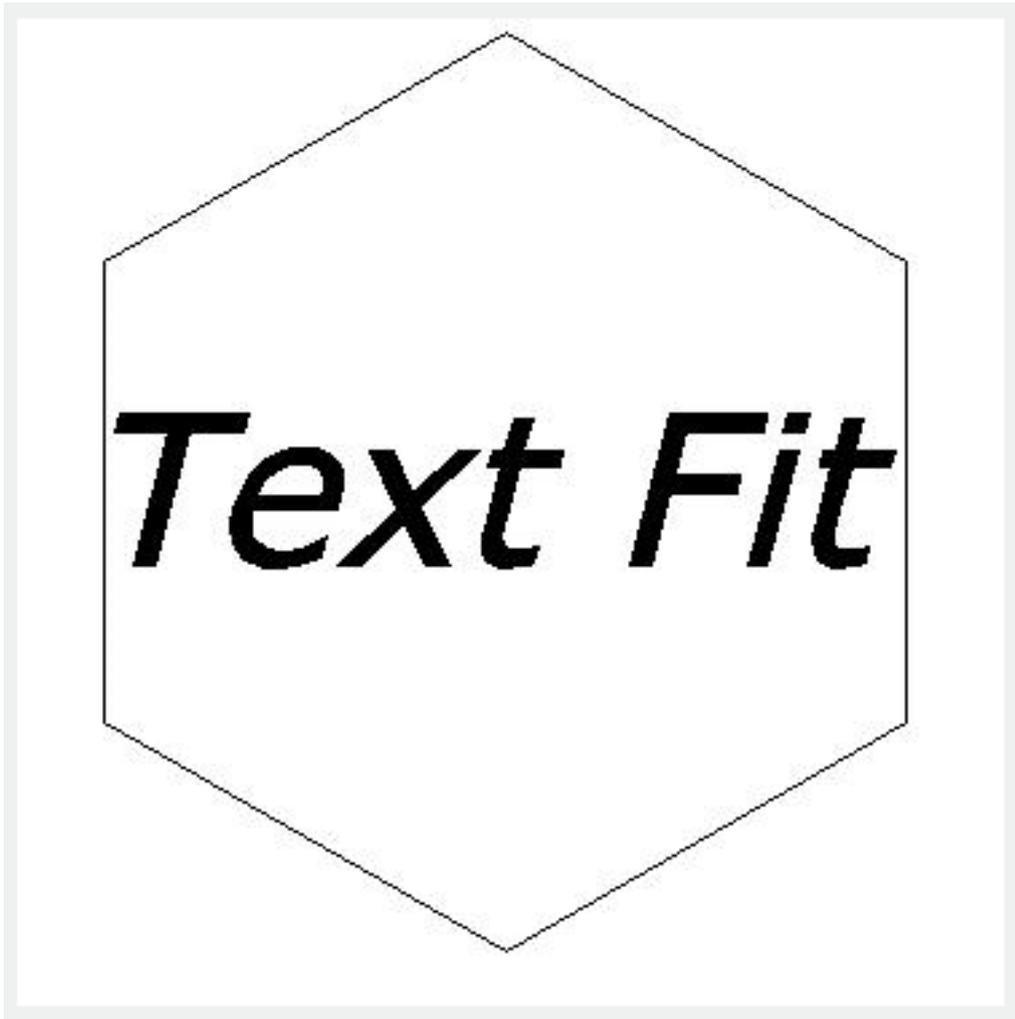

Command Entry : TEXTFIT

Menu : Text>Text Fit

Command line prompts as follow:

Select Text to stretch/shrink:

Specify end point or [Start point]: Specify a new end point, or enter S to specify a new start point.

Note: The default uses the text's justification as the start point. If a new start point is specified, prompts are displayed to specify new points.
