

XBIND command

2445 GstarCAD MY /KW August 25, 2021 [CAD Commands](#) 0 2945

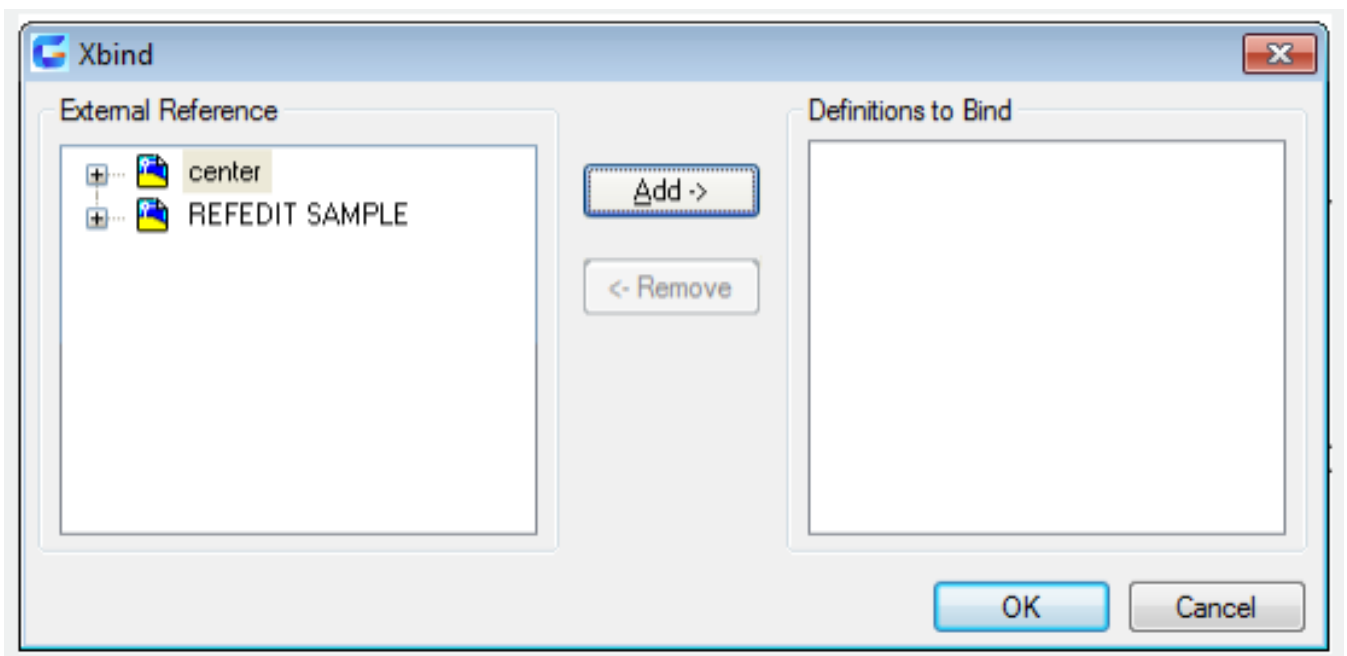

The **XBIND** command is used to bind one or more definitions of named object in external reference to current drawing.

Command Access:

Menu : Modify> Object >External reference> Bind

Command : XBIND

Function Description:

Inputting "-xbind" under the command prompt, it will display options.

Note: the "bind" option in external reference dialog box is used to bind files. The XBIND command is used to bind single related definition.
