XREF command

The **XREF** command is used to activate the EXTERNALREFERENCES command.
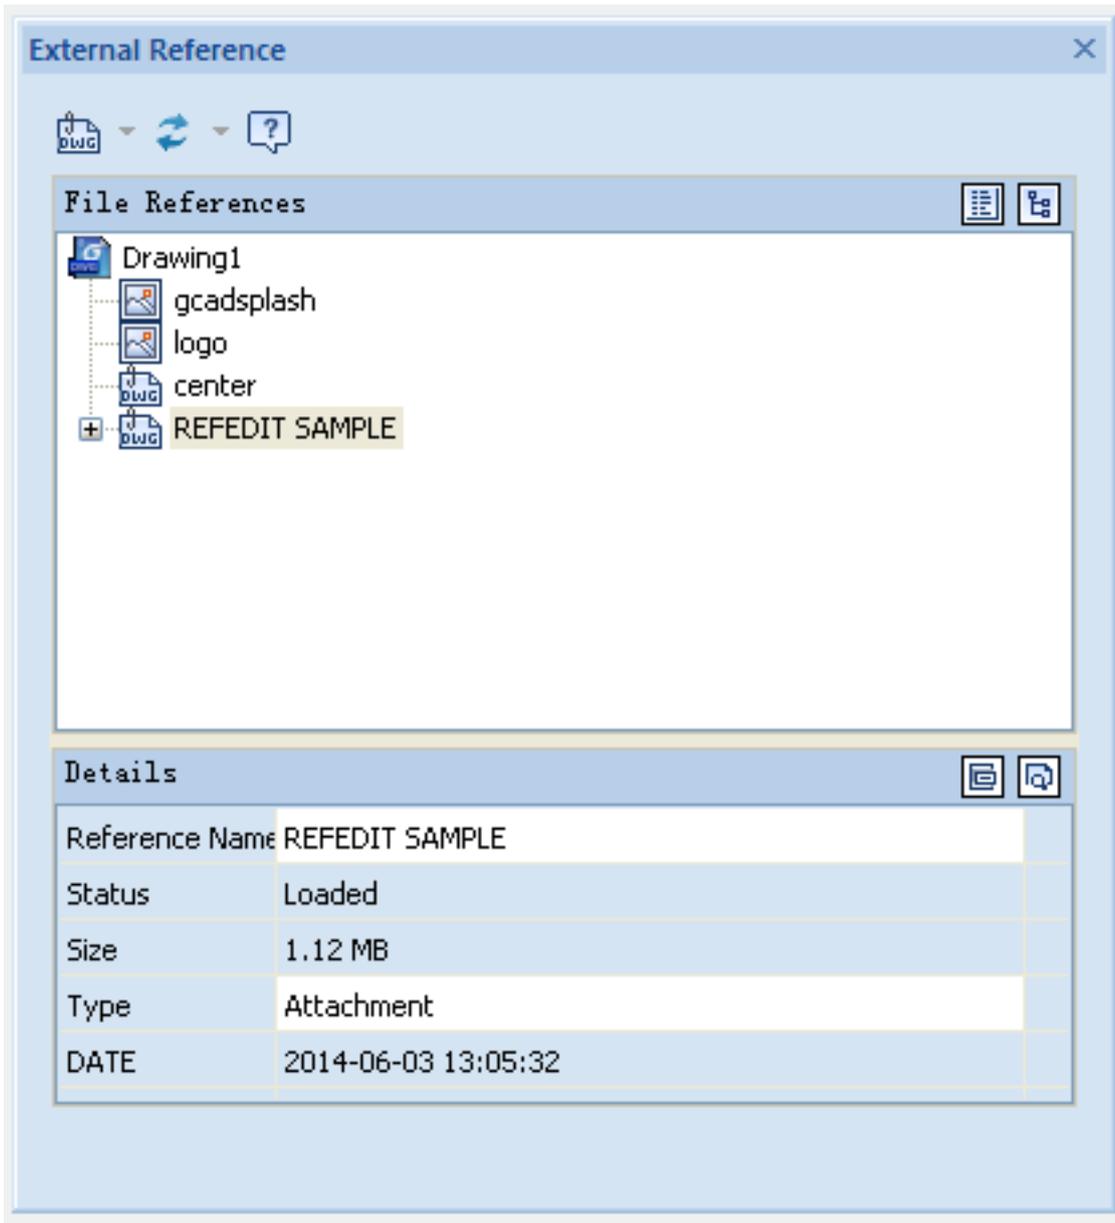

Command Access:

Command : XREF

Function Description:
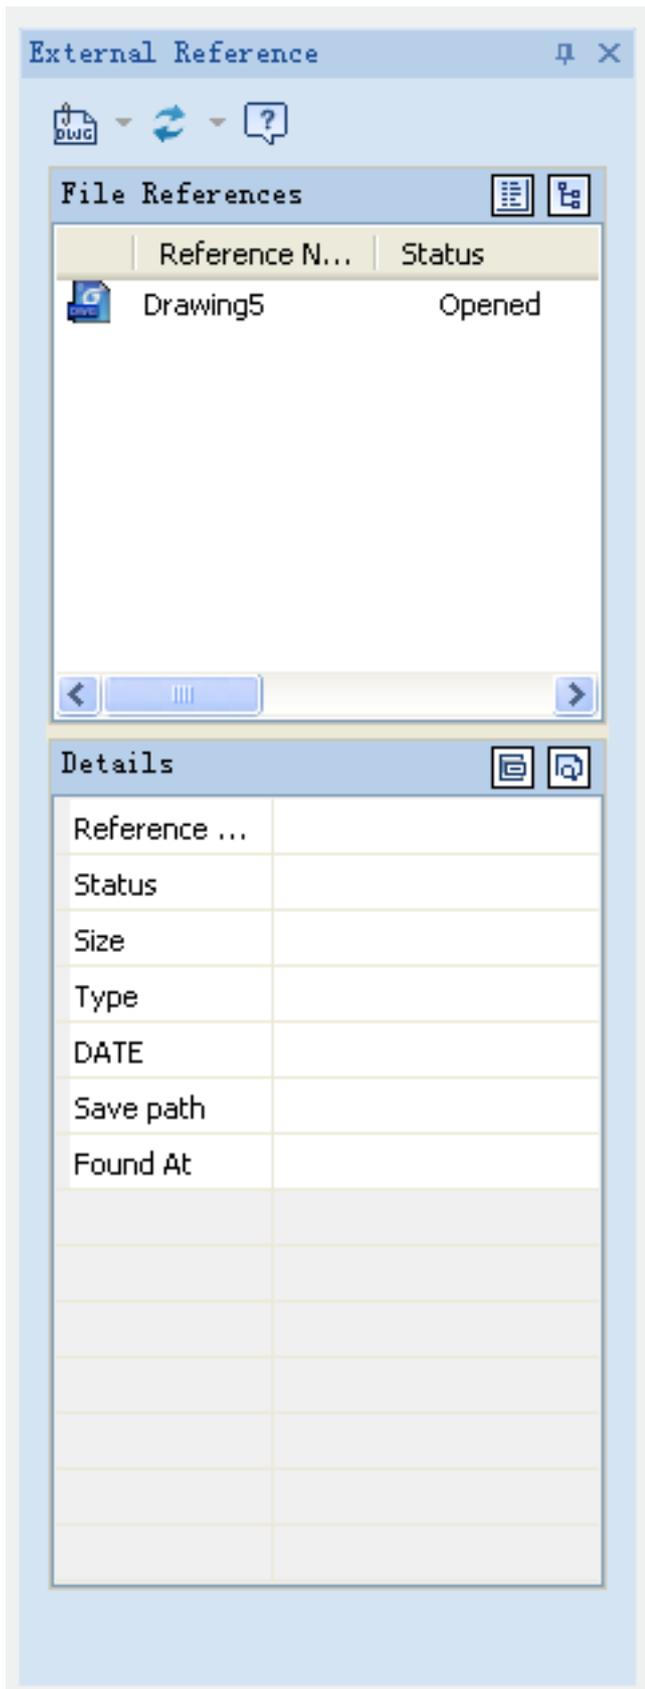

The Xref Manager dialog box is used to edit and control external reference in current drawing.

Relative Glossary:

List view:
External references in current drawing are displayed in two ways: list view and tree view.
Reference Name:
The reference name column always displays the current drawing as the first entry, followed by additional attached files that are listed in the order they were attached.
Status:
The status of the referenced file.
Size:
The size of the attached file reference.
Type:
The type of external reference file.
DATA:
The date when the referenced file was created or last saved.

Save path:

Display the path that is saved with the drawing when the referenced file is attached.

Tree view:

Display the path that is saved with the drawing when the referenced file is attached.

Attach:

Open the Dialog Box corresponding to the selected reference type.

Found At:

Display the full path of the currently selected file reference. This is where the referenced file is actually found and is not necessarily the same as the saved path.
