Create Single Line Text

Using **single-line text** [(TEXT Command)](#) you can create one or more lines of text, where each line is an independent object. When you create single-line text, you can start a new line by press ENTER or click in the drawing.

When you create single-line text, you can use current text style or specify another text style, you can specify the start point, height, rotation angle and justify of text.

You can create a leader with the [LEADER Command](#) or [QLEADER command](#) in any place of the drawing and you can set the format and control the appearance at the same time.
