

# Draw Lines

2499 GstarCAD MY /KW April 15, 2022 [Workflow](#) 0 3925

You can use the [LINE](#) command to generate one or a series of continuous line segments. Each segment is a separate line object, you can assign properties such as [COLOR](#) , [LINETYPE](#) and lineweight ([LWEIGHT](#)) to each line. If you want to connect the segments as a single object, you can use polyline objects.
