

# Overview of Dimension Styles

2564 GstarCAD MY /KW November 9, 2021 [Workflow](#) 0 1242

The appearance of dimensions like arrowhead style, text location and lateral tolerances are controlled by a dimension style. Using dimension styles ([DIMSTYLE](#)), you can specify the format of dimensions quickly and to ensure that dimensions are meet industry or project standards.

Dimensions use the settings of the current dimension style.

Change a setting in a dimension style, all dimensions in a drawing that use a certain style will be updated automatically.

Dimension substyles can be created for specified types of dimensions with some different parameters from the current dimension style.

A dimension style can be overridden temporarily.
