Import OLE Objects

Information from other OLE supporting applications can be imported into a drawing.

Link OLE Objects in Drawings

You can link information from a document created by another application to a drawing. When information in linked documents are changed, you can choose to update them manually or automatically. To choose automatic or manual updating, you can use OLELINKS .

Embed OLE Objects in Drawings

Objects can be embedded into a drawing by copying them to the Clipboard and then pasting them into the drawing file. If you have data and graphics in a another application window, you can drag them into your drawing and they will be embedded not linked.

Control Object's Quality

To manage the quality level of embedded OLE objects, you can use the system variable OLEQUALITY , which you can choose from 0 to 4 values.
