External Reference Palette

[GstarCAD 2027](#) · [Command Reference](#)

Commands > X Command > XREF > External Reference Palette

Function Description:

This palette is used to edit and control an external reference in the current drawing.

Palette Options:

List View and Tree View

External references in the current drawing are displayed in two ways: list view and tree view.

Reference Name

The reference name column always displays the current drawing as the first entry, followed by additional attached files that are listed in the order they were attached.

Status

The status of the referenced file.

Size

The size of the attached file reference.

Type

The file type of the external referenced file.

DATE

The date when the referenced file was created or last saved.

Save path

Displays the path that is saved with the drawing when the referenced file is attached.

Tree view

Displays the path that is saved with the current drawing when the referenced file is attached.

Found At

Displays the full path of the currently selected referenced file. This is where the referenced file is actually found and is not necessarily the same as the saved path.
