QUICKPROPERTIES Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > Q Command > QUICKPROPERTIES

Function Description:

This command is used to display quick property data for selected objects. Displays the Quick Properties palette that displays a customizable list of object properties for one or more selected objects. The QPMODE system variable controls whether the palette is displayed automatically when objects are selected.

Command Access:

Menu: /

Ribbon: /

Toolbar: /

Command: QUICKPROPERTIES

Alias: /

Command Prompts: /

The behavior of the Quick Properties palette is controlled by settings on the Quick Properties tab of the Drafting Settings dialog box (DSETTINGS command).

You can also customize the display properties of different types of objects according to your needs in the Customize User Interface (CUI) dialog box, as shown in the following figure.
