Access Content with DesignCenter

[GstarCAD 2027](#) · [User Guide](#)

User Guide > The User Interface > Design Center > Access Content with Design Center

You can find and load content into the content area with the help of the tree view on the left side of the "Design Center" palette and the three tabs.

Folder Tab

The following hierarchy icons are displayed in the Folder tab:

Network and Computer, computer drives, folders, drawings and related support files, Xrefs, layouts and named objects, including blocks, layers, linetypes, text styles and dimension styles within a drawing.

Open Drawings, History Tabs

- Open Drawings: On this tab a list of currently opened drawings is displayed. If you click a drawing file and then click one of the definition tables, you can load the content into the content area.
- History: On this tab a list of previously opened files is displayed. If you double-click a drawing file from the list, you can load the content into the content area.

Favorite

If you have contents need to access quickly on a regular basis, the "Design Center" provides a solution to finding those. When you select a drawing, folder or another type of content, you can right-click and choose to add it to Favorites. In favorite folder you can save shortcuts to content on local drives, a network drives. The original file or folder doesn't move; but all shortcuts you create are stored in the Favorites folder.
