GCCOLLINEAR Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > G Command > GCCOLLINEAR

Function Description:

Makes two or more line segments align along the same straight line, effectively making them collinear.

Command Access:

Menu Item: Parameters (P) > Geometric Constraints (G) > Collinear (COL)

Ribbon: Parameters > Geometric Constraints > Collinear

Toolbar: /

Command Line: GCCOLLINEAR

Command Alias: /

Command Prompts:

Select first point or [Multiple (m)]: Prompts the user to select the first line segment or set of objects that need to be constrained to be collinear.

Select second point or [Multiple (m)]: Prompts the user to select the second line segment or set of objects that should be collinear with the first selection.

Operation Steps:

1. As shown in the figure (which is not provided here), select two line segments to which you want to apply the Collinear constraint.

2. The two line segments will be constrained to be collinear, meaning they will lie on the same straight

line.
