GROUP Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > G Command > GROUP

Function Description:

This command is used to create and manage the saved sets of objects called groups. If you enter -GROUP at the Command prompt, options are displayed. Groups provide an easy way to combine drawing objects that you need to manipulate as a unit. By default, selecting any member of a group selects all the objects in that group and you can move, copy, rotate and modify groups just as you can modify individual objects.

Command Access:

Menu: Tools > Group

Ribbon: /

Toolbar: /

Command: GROUP

Alias: G

Command Prompts:

Select objects or [Name/Description]:

Select objects

Specifies which objects should be grouped.

Name

Assigns a name to the group of items you select.

Description

Adds a description of the group. The description is displayed with the -GROUP command when you use the asterisk (*) to list existing groups.
