VBA Manager Dialog Box

[GstarCAD 2027](#) · [Command Reference](#)

Commands > V Command > VBAMAN > VBA Manager Dialog Box

Function Description:

Loads, unloads, saves, creates, embeds, and extracts Visual Basic for Applications (VBA) projects.

Dialog Box Options:

Drawing

Specifies the active drawing.

Embedded

Specifies the name of the embedded project for the drawing. If the drawing does not contain an embedded project, “(none)” is displayed.

Extract

Moves the embedded project out of the drawing and into a global project file. If you have never saved the project, you are prompted to save it.

Projects

Lists the name and location of all the projects currently available in the current work session.

Embed

Embeds the selected project in the specified drawing. A drawing can contain only one embedded project. You cannot embed a project in a drawing that already contains an embedded project.

New

Creates a new project with the default name “Global n,” where n is a session-based number incremented with each new project.

Save As

Saves a global project. This option is available only when an unsaved global project is selected.

Load

Displays the Open VBA Project dialog box (see VBALOAD), in which you can load an existing project into the current work session.

Unload

Unloads the selected global project.

Macros

Displays the Macros dialog box, in which you can run, edit, or delete a VBA macro.

Visual Basic Editor

Displays the Visual Basic Editor in which you can edit code, forms, and references for any loaded global VBA project or any embedded VBA project in an open drawing. You can also debug and run projects from the Visual Basic Editor.
