RAY Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > R Command > RAY

Function Description:

This command is used to create an unlimited extension line from one point. The starting point and the through point define the ray extension direction. The ray is extended to the boundary of the display area. The command prompt of Specify through point will not stop until pressing Enter. The ray is a line with unlimited extension in one direction, it can be used as reference of other objects.

Command Access:

Menu: Draw > Ray

Ribbon: Home > Draw > Ray

Toolbar: /

Command: RAY

Alias: /

Command Prompts:

Specify start point:
