RECOVER Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > R Command > RECOVER

Function Description:

This command is used to recover a damaged drawing file and reopen it.

This command can extract as much data as possible from the damaged file. The DWG, DWT and DWS files are all repairable files. The DXF file can be repaired by opening it only.

Entering the drawing file name or selecting the damaged drawing file in the Select Files dialog box, the command prompt displays recover results. If specifying the FILEDIA system variable to 0, the RECOVER command will only display prompts.

Entering a "~" under the prompt, the Select Files dialog box is displayed without regardless to the FILEDIA system variable.

Command Access:

Menu: File > Drawing Utilities > Recover...

Ribbon: /

Toolbar: /

Command: RECOVER

Alias: /

Command Prompts: /
