M2LVPORT Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > M Command > M2LVPORT

Function Description:

This command is used to create a viewport on layout space by selecting objects in the model space. And then calculates the viewport size according to the set scale and locates the viewport in the layout. You can quickly create and set a viewport of the current drawing. This command can be quickly invoked on the right-click menu of the model/layout tab.

The Define the Layout Viewport from Model Space dialog box is displayed.

Command Access:

Menu: /

Ribbon: View > Model Viewports > Layout Viewport

Toolbar: /

Command: M2LVPORT

Alias: /

Shortcut:

Right-click on the Model/Layout tab and then select Define the Viewport from Model...

Command Prompts: /
