MENU Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > M Command > MENU

Function Description:

This command is used to load the custom files. The Select Customization Files dialog box is displayed.

In the dialog box, users can select or enter the custom file name. Those custom files are based on XML files,

they can be customized menu, toolbar, workspace, and other interface elements.

Users can also create customized files and use the MENU or CUI commands to load them.

Note: In early versions, users use traditional files, such as traditional menu files (MNS), traditional menu template (MNU) and customized files (CUI). Now these types of files have been replaced by another kind of file type called CUIx. That is to say: the CUIx files based on XML.

Command Access:

Icon: /

Menu: /

Ribbon: /

Toolbar: /

Command: MENU

Alias: /

Command Prompts: /
