MTEXT Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > M Command > MTEXT

Function Description:

This command is used to create a multiline text. Users can change several text paragraphs to a single multiline text and use the Text Formatting to edit the text appearance, column, and boundary. If you enter -MTEXT at the Command prompt, options are displayed without the In-place Text Editor.

Command Access:

Menu: Text > Multiline Text...

Ribbon: Annotation > Text > Mtext/Home > Annotation > Mtext

Toolbar: Text > Multiline Text...

Command: MTEXT

Alias: MT

Command Prompts:

Specify first corner point:

Specify opposite corner or [Height/Justification/Linespacing/Rotation/Style/Width/Column]:
