Multiline Style Dialog Box

[GstarCAD 2027](#) · [Command Reference](#)

Commands > M Command > MLSTYLE > Multiline Style Dialog Box

Function Description:

Creates, modifies, saves and loads multiline styles. The multiline style controls the number of elements and the properties of each element. The MLSTYLE command also controls the background color and the endpoint caps of each multiline.

Dialog Box

Options:

Current Multiline Style

Displays the name of the current multiline style to be used to create multilines later.

Styles

Displays a list of loaded multiline styles in the drawing.

In the style list, it also lists multiline styles in the Xref drawings.

Multiline styles in Xref drawing use the same grammar as other externally dependent non-graphic objects.

Description

Displays the description of the selected multiline style.

Preview

Displays the name and an image of the selected multiline style.

Set Current

Sets the selected multiline style to be the current for creating multilines later.

Note: The multiline style in an Xref drawing can not be set to the current.

New

Displays the New Styles dialog box, in which users can create a new multiline style.

Modify

Displays the Modify Multiline Styles dialog box, in which users can modify a selected multiline style.

Note: Users are unable to edit the element and properties of any multiline style which is being used in the drawing on. Users should edit a multiline style before using it to create any multilines.

Rename

Renames the currently selected multiline style. Users can not rename the STANDARD multiline style.

Delete

Removes the currently selected multiline style from the list. This operation can not delete the style from the MLN file.

The following multiline styles can not be deleted: STANDARD style, the current multiline style, or a multiline style that is in use.

Load

Displays the Load Multiline Style dialog box, in which users can load multiline styles from a specified MLN file.

Save

Saves or copies a multiline style to a MLN file. If specifying an existing MLN file, a new style is defined and added to this file, and the existing definitions are not erased.
