

LOFTANG2 System Variable — GstarCAD 2027

LOFTANG2 System Variable

[GstarCAD 2027](#) · [System Variables](#)

System Variables > L System Variables > LOFTANG2

Function Description:

The LOFTANG2 system variable is used to set the draft angle through the last cross section in the loft operation.

Type	Real
Saved in	Drawing
Initial value	90
Range	0 ~ 360

The 0 direction is measured outward from the curve on the plane of the curve. The positive direction is measured toward the next cross section.
