LAYTHW Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > L Command > LAYTHW

Function Description:

This command is used to thaw all layers in the drawing.

All frozen layers can be thawed. Objects created on thawed layers become visible except the layers are also turned off or have been frozen in all other layout viewports. For those frozen layers in other layout

viewports, users should firstly thaw them in each layout one by one.

Note: Users can thaw layers in a viewport by the VPLAYER command rather than the LAYTHW command.

Command Access:

Menu: Format > Layer Tools > Thaw all layers

Ribbon: Home > Layer > LAYTHW

Toolbar: /

Command: LAYTHW

Alias: /

Command Prompts:

All layers have been thawed.
