LAYTRANS Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > L Command > LAYTRANS

Function Description:

This command is used to translate the layers in the current drawing to specified layer standards. Users can map the layers in the current drawing to different layer names and layer properties in a specified drawing or standards file, and then convert them using those mappings. The [Layer Translator dialog box](#) is displayed.

Command Access:

Menu: Format > Layer Tools > Layer Translator...

Ribbon: Manage > CAD Standards > Layer Translator

Toolbar: Layer > Layer Translator...

Command: LAYTRANS

Alias: /

Command Prompts: /
