

VTFPS System Variable — GstarCAD 2027

VTFPS System Variable

[GstarCAD 2027](#) · [System Variables](#)

Function Description:

The VTFPS system variable is used to set the minimum speed for smooth view transition by frames per second.

Type	Integer
Saved in	Registry
Initial value	7
Range	1 ~ 30

If smooth view transition can not keep this speed, it will use an instantaneous speed transition.
