PLOTCMDCOMPATIBILITY System Variable

[GstarCAD 2027](#) · [System Variables](#)

System Variables > P System Variables > PLOTCMDCOMPATIBILITY

Function Description:

The PLOTCMDCOMPATIBILITY system variable is used to control whether to change the PLOT and -PLOT commands from MODAL mode to SESSION mode.

Type	Integer
Saved in	Registry
Initial value	0
Range	0/1

System Variable Value:

- 0:** All behaviors are consistent with the default scenario.
- 1:** Change the PLOT and -PLOT commands from MODAL mode to SESSION mode, executing all behaviors in the interface fiber to ensure hardware layer access within the same stack.
