ANNOUPDATE Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > A Command > ANNOUPDATE

Function Description:

Updates existing annotative objects to match the current properties of their styles.

When a non-annotative text object is updated to an annotative text style, the object becomes annotative and supports the current annotation scale. If the text style has a fixed Paper Height, the object is set to that height. If the text

style's Paper Height is set to 0, the size of the text does not change. The Paper Height value is inferred by dividing the model height by the current annotation scale.

If an annotative object is updated to a non-annotative style, the object becomes non-annotative and any alternate scale representations are removed.
