ARRAYPOLAR Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > A Command > ARRAYPOLAR

Function Description:

Evenly distributes object copies in a circular pattern around a center point or axis of rotation. This command is equivalent to the Polar option in ARRAY. The DELOBJ system variable controls whether the source objects of the array are deleted or retained after the array is created.

Command Access:

Menu: Modify > Array > Polar Array
Ribbon: Home > Modify > Polar Array
Toolbar: Array > Polar Array
Command: ARRAYPOLAR
Alias: /

Command Prompts:

Select object:

The new polar array can not only set the number and included angle in the circumferential direction, but also set the number of rows and layers to generate a three-dimensional array, as shown in the figure below.
