BACTION Command

[GstarCAD 2027](#) · [Command Reference](#)

Commands > B Command > BACTION

Function Description:

This command is used to add actions to dynamic block definitions. This command is available only in the Block Editor. Actions define how the geometry of a dynamic block reference moves or changes when the custom properties of a block reference are manipulated in a drawing. You associate actions with parameters.

Command Access:

Menu: /

Ribbon: Block Editor > Action > Action

Toolbar: /

Command: BACTION

Alias: /

Command Prompts:

Select parameter:
